**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Franks et al, US Patent 4,879,751 in view of Matsushige, US Patent 5,487,067. Franks et al disclose a signal processing system in which a set of automation commands are generated whereby the automation commands are generated based on timecodes (see column 2 lines 3-18). However, Franks does not disclose invoking a first set of automated signal processing functions using the automation commands and invoking a second set of automated signal processing functions using a different timecode. Matsushige discloses an audio mixer having automation commands and communication with peripheral devices. The synchronization of the data channels is accomplished by using a plurality of timecodes. Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to use a different timecode for invoking a second set of automated signal processing functions, as taught by Matsushige, in the apparatus of Franks for the purpose of automating a plurality of audio channels that have different timings. Claims 1 and 3 are met. As to claim 2, it was obvious to assign a source signal with an associated timecode signal since different source signals have the possibility of different sampling rates. Per claims 4-6 and 11, it was well know at the time of invention to store information such as commands and codes on storage mediums.

Art Unit: 2644

*Allowable Subject Matter*

Claims 7-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim 12 is allowed.

*Conclusion*
